

Bathroom Zones

Using electrical equipment in bath or shower rooms need extra care to ensure safety. As a result IEE Wiring Regulations have identified particular zones within the bathroom to indicate what type of electrical equipment that can be installed and where.

All our electric elements are CE certified and have IPX1 rating. As a result, all towel radiators with electric elements **MUST** be installed on Zone 3 or an area beyond Zone 3 only.

Tip!: Green area on the image below is safe to install an electric or dual use towel radiator.

- Zone 0** The interior of the bath or shower which can hold water.
- Zone 1** The area directly above zone 0 limited vertically to 2.25m above the bottom of the bath or shower.
- Zone 2** The area beyond zones 0 and 1, 0.6m horizontally and up to 2.25m vertically. Zone 2 also included any window with a sill next to the bath.
- Zone 3** The area beyond zones 2, 2.4m horizontally and up to 2.25m vertically.

Please note that this information is given as guidance only.
 You **MUST** consult a trained and certified electrician for your own safety.
